Supervisors: mr. J.D. Top (MSc) & dr. H.A. de Weerd

Mod-Signal Game

- Numbers range from 1 to 24
- 2 players
- Players choose a number simultaneously
- Players gain a point if their choice is exactly 1 higher than other player's choice
- One player signals before round
- Player that signals alternates every round
- Player does not have to adhere to signal

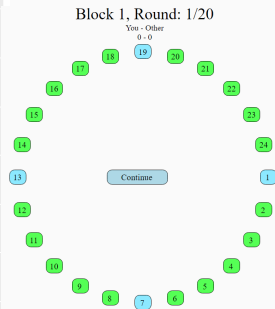

Methodology

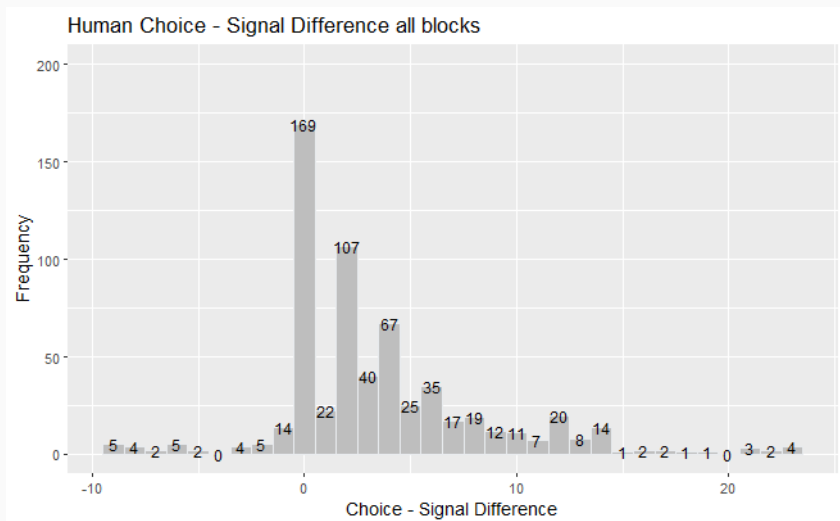

- 21 participants
- 3 participants per session (+ confederate)
- played on computer
- participants sit in the same room separated by barriers
- headphones
- 3 blocks of 20 rounds per session
- questionnaires
- confederate pretends to play as the agent

Results

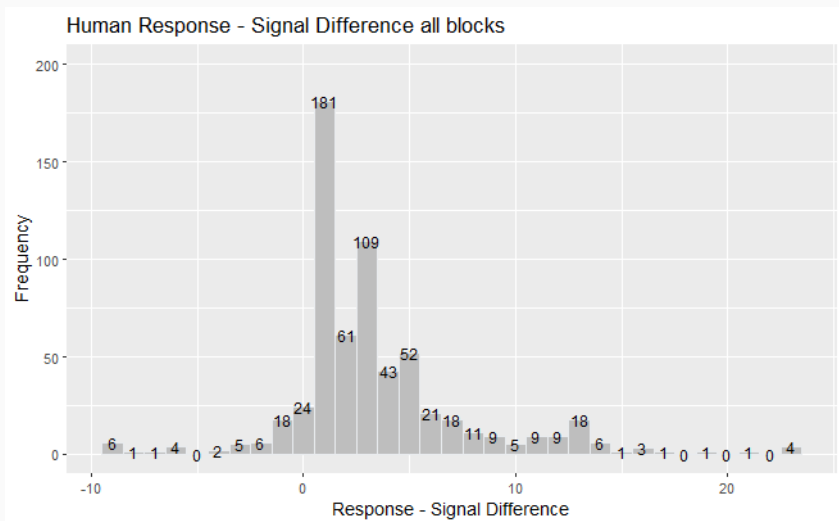

Results

Results

Results

Results

Results

Results

- Honesty: playing the number that you signalled
- Trust: playing the number that the other player signalled + 1

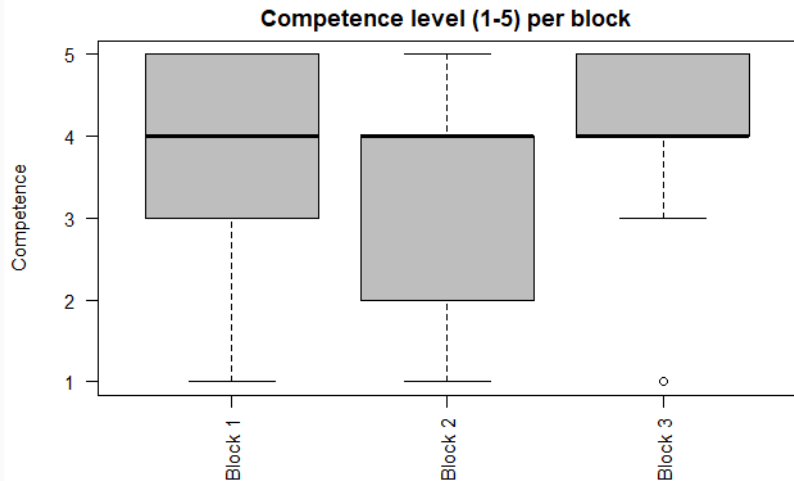

Results

Results

Results

Conclusion

Results show that there seems to be little to no difference in human behaviour between playing with another human and unknowingly playing against an agent

Discussion

- Extract strategies
- Honesty/trust reaction times
- Experiment setup
- Order effect blocks

Appendix

Appendix: Agent behaviour

- Always cooperates on first round
- Cooperates with a certain probability after first round
- Probability = $\frac{\text{number of rounds played cooperatively in last 3 rounds}}{\min(3, \text{round number})}$
- Deceives by taking the difference of the human's choice and the cooperative choice from last round and adding that to the current signal + 1

Appendix: End of block questionnaire

- Describe the strategy that you used this block.
- What did you think of the other player's strategy? Briefly describe their strategy as well.
- Rate the other player's cooperativeness, competitiveness and competence level on a scale from 1-5.
- Would you want to play with this player again? Explain briefly.

Appendix: General questionnaire

- Age/sex/study programme
- Were the instructions sufficient enough to get a proper understanding of the game?
- What was your mood like today?
- Did you have any prior knowledge about the Mod Game before the start of the experiment?
- Did you know any of the other participants that you played with in the session before the start of the experiment?
- For each block give a percentage on how confident you are that you played with a human in that block
- P-beauty contest

Appendix: Honest/dishonest reaction times

Appendix: Trust/distrust reaction times
