General Questionnaire

Question 1

What is your age, sex and what are you studying?

18 years old male studying Artificial Intelligence.

Question 2

Were the instructions provided at the start sufficient enough to understand the game? If not, were the trials enough to get a proper understanding of the game?

I found the instructions very clear and I understood the general strategy of the game quick.

Question 3

What was your mood like today?

Nothing special, I'm not happy since I was a bit late but not sad or annoyed either, just neutral though I did enjoy the game

Question 4

Did you have any prior knowledge of the Mod Game before the start of the experiment?

I have no recollection of playing it before.

Don't forget to answer the questions on the other side of the paper!

Question 5

Did you know any of the other participants that you played with in the session before the start of the experiment?

I didn't manage to get a good look at them but I'm pretty sure I saw one person who I knew.

Question 6

Some of our participants have played the Mod-Game with a computer partner rather than a human partner in some of the blocks.

For each block give a percentage on how confident you are that you played with a human partner in that block and briefly explain why. (e.g. Block 1: 100%, you are completely certain that you played with a human partner)

Block 1:

90% they also played logically throughout and since I already believe that block 3 is a computer I feel like the 2 other blocks were against human players.

Block 2:

100%, they played logically during the game and I had to wait a while to start which I don't think would've happened with a computer.

Block 3:

50% playing against a computer would've explained the odd choices to play.

P-beauty contest

All participants will do this contest. The winner gets a Tony's Chocolonely chocolate bar of their choice! Mark the number that you think will be the average of the numbers chosen by all participants, divided by 3 and multiplied by 2.(take ⅔ of the number you think will be the average of the numbers chosen by all participants, e.g. if you think 90 will be the average of the numbers chosen by all participants, you mark 60)

0   10   20   30   40   50   60   70   80   90   100
